OEMA - What Does It Mean

Q1: I see OEMA on the application chart, what does that mean?

A1: OEMA is an acronym for Original Equipment Manufacturer Adjustment. This means that from the factory, the OEM has provided adjustment that comes with every car. In many cases there are adjusters that allow for camber and toe built right in. If the only listing for your application is OEMA, a qualified alignment technician will be able to identify the adjuster on your vehicle.
